DHAKSHITH BAVAN S

AI/ML Developer | Computer Vision Enthusiast | B.Tech CSE (AI) Student

Email: dhakshithbavan1004@gmail.com | Phone: +91 9025069558 | Location: Krishnagiri, Tamil Nadu, India

PROFESSIONAL SUMMARY

B.Tech Computer Science (AI) student with hands-on experience in data handling, computer vision, and AI-based projects, backed by an internship in Data Science, AI and Machine Learning. Eager to build practical solutions and grow through collaborative, applied learning.

EDUCATION

B.Tech Computer Science (Artificial Intelligence) — **2024 – 2028 | CGPA: 6.5**
Karunya Institute of Technology and Sciences — Coimbatore, Tamil Nadu

Class XII (Higher Secondary Certificate) — **2024 | Score: 72.83%**
Sri Vijay Vidyalaya Matric Hr. Sec. School — Krishnagiri, Tamil Nadu

INTERNSHIP EXPERIENCE

Data Science, AI & ML Intern — **20 May 2026 – 20 June 2026**
iGeeks Technologies — Bangalore, India

- Contributed to the R&D team's Data Science, AI and Machine Learning initiatives as part of a project team.
- Applied Python programming to real project tasks and strengthened core Data Science and Machine Learning fundamentals.
- Collaborated with team members and HR to complete assigned work on schedule.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, C
- **AI, ML & Computer Vision:** Computer Vision, YOLOv11, MediaPipe, Object Detection, Hand Tracking, Feature Extraction, Ensemble ML
- **Tools & Platforms:** Git, GitHub, Arduino, Android Studio, IoT and Bluetooth
- **Core Fundamentals:** Networking Basics, Cybersecurity Basics
- **Soft Skills:** Teamwork, Communication, Coordination, Problem-Solving

ACADEMIC PROJECTS

Context-Aware Workspace Organizer: Optimizing Object Placement Based on User Workflow

Technologies: YOLOv11, MediaPipe, Streamlit, Python

Built a vision-based system that detects objects such as books, laptops, and stationery using YOLOv11 and tracks hand-object interactions using MediaPipe to record usage frequency and dwell time. Features workflow-aware layout optimization recommendations based on co-usage patterns and reach distance with a real-time Streamlit dashboard.

HemoNail Detector – AI-Based Non-Invasive Hemoglobin Estimation (Experimental)

Technologies: Computer Vision, Feature Extraction, Ensemble Machine Learning, Python

Developed an experimental non-invasive hemoglobin estimation prototype using smartphone images of fingernail beds and skin. Uses ROI color space extraction (RGB/HSV/LAB) and ensemble ML regression. Note: Academic research screening exploration, not a clinically certified medical tool.

GestureSpeak – Smart Gloves: Sign Language Detection

Technologies: Arduino, Bluetooth, Python, Android Studio, Sensors

Built an IoT-based glove hardware system that translates sign language gestures into speech. Features flex sensor gesture detection on sensory gloves, Arduino hardware interfacing, Bluetooth serial communication, and an Android app with real-time text-to-speech functionality.

CERTIFICATIONS

- **Cisco:** Python Programming, C Programming, Networking Basics, Introduction to Cybersecurity
- **Infosys:** Ethics and Project Management, Java Programming Fundamentals
- **IBM:** Artificial Intelligence Fundamentals
- **SkillForge:** Artificial Intelligence with Python
